Canada

Statistics Canada (StatCan) produces population estimates that are widely considered to be of high quality and are foundational to Canadian society, used for everything from federal funding allocation to calculating economic indicators. StatCan uses a multi-layered approach that combines the Census of Population (taken every 5 years) with administrative data to create estimates, ensuring data is both timely and reliable. Between censuses, StatCan adds births and incoming immigrants/non-permanent residents, while subtracting deaths and emigrants. Population estimates are usually higher than the raw census counts because they adjust for the estimated people who were missed.
